Email: kiwamu@debian.or.jp
Homepage: <http://masterq.metasepi-design.com/>

Brief

I launched my career on developing embedded devices using Unix-like kernel at Ricoh Company, Ltd. The experience was not only for designing device drivers but also including debug of virtual memory. And I have experience in IoT platform such as ARM Cortex-M MCU and RTOS. Also I learned application design using functional language such as Haskell, and published some research papers¹ about such languages.

Skill Set

Deep knowledge for Unix-like Kernel and User Space

I am an expert for Unix-like kernel such as Linux, because I provided technical support for NetBSD, which is a Unix-like OS similar to Linux, at Ricoh. My skill is not only for NetBSD but also Linux. In fact, a race condition bug in PowerPC Linux kernel was fixed by me in only five days at MIRACLE LINUX.

Wide experience in IoT platform

I have a wide experience in IoT platform such as FreeRTOS, ChibiOS/RT², ARM Cortex-M, ESP8266, AVR and MSP430. Also I launched a new IoT business using TWELITE wireless platform³ at Centillion Japan.

Leadership

I was leading a technical team of twenty people to support the OS at Ricoh. And also I have experience in leading offshore team in china to maintain web application at Centillion Japan.

Research Security and Quality

A prototype of own Secure-OS similar to OP-TEE⁴ was designed by me at SELTECH. It runs with the other RTOS on ARM Cortex-M MCU. Also I have a wealth of experience in strong static typing language such as Haskell and verification of C language such as VeriFast⁵, which are useful to keep the quality of products.

Work Experience

July 2013 - Present: Freelance Researcher

- Research and develop Ajhc Haskell Compiler⁶
- Host meetup⁷ for hands-on to verify embedded application on ARM Cortex-M using STM32⁸ board and ST-LINK⁹ debugger
- ATS language evangelist¹⁰¹¹ for embedded devices
- Verification evangelist using VeriFast, which is a verifier C language programs annotated with preconditions and postconditions
- Translated VeriFast Tutorial into Japanese¹²
- Support to develop any embedded software
- Manage Metasepi Project¹³ and develop the core technology

February 2018 - July 2018: Software Architect at SHINKAWA LTD.

- Research and develop new software platform for wire bonding during semiconductor device fabrication

August 2014 - October 2017: Part-time Researcher at RIKEN Advanced Institute for Computational Science

- Research embedded functional programming running on ARM Cortex-M and AVR
- Verification for RTOS application such as ChibiOS/RT running on ARM Cortex-M

November 2016 - October 2017: Expert Engineer (permanent employee) at SELTECH CORPORATION

- Maintain a Hypervisor for embedded market
- Design and develop own Secure-OS for ARM platform

February 2016 - November 2016: Software Engineer (contract employee) at Life Robotics Inc.

- Design GUI application running on Linux OS, using C++ and Qt¹⁴
- Design network protocol for Robotics application

¹³<http://www.metasepi.org/>

¹⁴<https://www.qt.io/>

March 2015 - February 2016: System Enginner (contract employee) at Centillion Japan Co., Ltd.

- Technical support for stock chart application using JavaScript
- Maintain MySQL database servers
- Launch new IoT business for farming
- Design a platform¹⁵ to accelerate R programs

September 2014 - December 2014: Software engineer (trustee agreement) at Axsh co., LTD.

- Develop an OpenFlow application named “OpenVNet”¹⁶
- Design automation scripts for AWS using Ruby and GNU make

March 2012 - July 2013: Software Engineer (permanent employee) at MIRACLE LINUX CORPORATION

- Maintain own Digital Signage platform running on Intel architecture using Linux OS, C++, OpenGL, GTK+¹⁷ and GStreamer¹⁸
- Verify and tune up performance of Digital Signage on new Intel platform and Intel video driver
- Verify PowerPC Linux kernel and debug/fix a race condition in the SMP kernel
- Debug and fix bug of crash¹⁹ command’s PowerPC virtual memory paging
- Design new Windows installer using NSIS²⁰
- Introduce and maintain new Git server for internal use

April 2001 - February 2012: Software Development Engineer (permanent employee) at Ricoh Company, Ltd.

- Develop BIOS and bootloader for multifunction printer on Intel architecture
- Design secure boot for multifunction printer on Intel architecture
- Develop new BIOS for multifunction printer
- Tune multifunction printer boot time as 10 seconds
- Develop POSIX thread library
- Develop and technical support NetBSD OS
- Port OS to new Intel hardware

Education

- March 2001: Master of Engineering from Department of Electrical and Electronic Engineering, Tokyo Metropolitan University.
The thesis: “Multimode Quartz Crystal Microbalance”²¹

Publications and Reports

- Kiwamu Okabe and Hongwei Xi. “Arduino programing of ML-style in ATS”²². ML workshop, 2015.
- Kiwamu Okabe and Takayuki Muranushi. “Systems Demonstration: Writing NetBSD Sound Drivers in Haskell”²³. Haskell Symposium, 2014.
- Kiwamu Okabe. “ATS 言語を使って不変条件を API に強制する”.²⁴ 夏のプログラミング・シンポジウム 2014, 2014.
- Kiwamu Okabe, Hiroki MIZUNO and Hidekazu SEGAWA. “強い型による OS の開発手法の提案”²⁵. 第 55 回プログラミング・シンポジウム, 2014.

Activities

Open-source projects

Metasepi Project²⁶

- Challenge to create an open-source Unix-like operating system designed with strong type such as ML or Haskell.
- Rewriting NetBSD kernel using Ajhc Haskell compiler. <https://github.com/metasepi/netbsd-arafura-s1>

Ajhc Haskell compiler²⁷

- Extend and add embedded features to Jhc Haskell Compiler <http://repetae.net/computer/jhc/>.
- Ajhc has thread-safe and reentrant runtime. Also has Erlang style GC. It means Ajhc’s Haskell context has own GC heap. GC can run on tiny CPU such as Cortex-M3 with 32kB RAM.

Japan ATS User Group²⁸

- An user group for ATS language promotion of utilization. Translating ATS documents into Japanese.

Debian Maintainer²⁹

- Maintained uim package at Debian squeeze, and packages using Haskell at sid.

Carettah³⁰

- A presentation tool written with Haskell. All of my slides³¹ are created by the tool.

Computer Skills

- Languages: C, C++, Haskell, Intel/ARM assembler, Ruby, OCaml, Python, Erlang, JavaScript, R
- Platforms: Linux, NetBSD, FreeRTOS, ChibiOS/RT, Android NDK, Cygwin, MinGW, Bare metal
