Phone: +81-90-3524-7064  
Email: [kiwamu@debian.or.jp](mailto:kiwamu@debian.or.jp)  
Homepage: <http://masterq.metasepi-design.com/>

## Brief

I launched my career on developing embedded devices using Unix-like kernel at Ricoh Company, Ltd. The experience was not only for designing device drivers but also including debug of virtual memory. And I have experience in IoT platform such as ARM Cortex-M MCU and RTOS. Also I learned application design using functional language such as Haskell<sup>1</sup>, and published some research papers<sup>2</sup> about such languages.

I would like to continue to pursue quality improvement technologies (including security) regardless of the software layer.

## Skill Set

### *Deep knowledge for Unix-like Kernel and User Space*

I am an expert for Unix-like kernel such as Linux, because I provided technical support for NetBSD<sup>3</sup>, which is a Unix-like OS similar to Linux, at Ricoh. My skill is not only for NetBSD but also Linux. In fact, a race condition bug in PowerPC Linux kernel was fixed by me in only five days at MIRACLE LINUX.

### *Wide experience in IoT platform*

I have a wide experience in IoT platform such as FreeRTOS, ChibiOS/RT<sup>4</sup>, ARM Cortex-M, ESP8266, AVR and MSP430. Also I launched a new IoT business using TWELITE wireless platform<sup>5</sup> at Centillion Japan.

### *Research Security and Quality*

A prototype of own Secure-OS similar to OP-TEE<sup>6</sup> was designed by me at SELTECH. It runs with the other RTOS on ARM Cortex-M MCU. Also I have a wealth of experience in strong static typing language such as Haskell and verification of C language such as VeriFast<sup>7</sup>, which are useful to keep the quality of products.

## Work Experience

*December 2020 - Present: Software Engineer (permanent employee) at Donuts Co. Ltd.*

Responsibilities:

- Maintaining an ERP web application using PHP, JavaScript, MySQL, and AWS

Key Achievements:

- Created a black-box testing tool running Docker to get better performance and keep quality

*July 2013 - November 2020: Freelance Researcher*

Responsibilities:

- Researching and developing Ajhc Haskell Compiler<sup>8</sup>
- ATS language<sup>9</sup> evangelist for embedded devices
- Verification evangelist using VeriFast<sup>10</sup>, which is a verifier C language programs annotated with preconditions and postconditions

Key Achievements:

- Published some research papers<sup>11</sup>
- Translated ATS documents into Japanese<sup>12</sup>
- Translated VeriFast documents into Japanese<sup>13</sup>

*October 2019 - March 2020: Software Engineer (trustee agreement) at QuantumCore CORPORATION*

Responsibilities:

- Porting a machine learning called “reservoir computing” onto ARM Cortex-M MCU
- Porting the machine learning onto Android platform

Key Achievements:

- Developed a library for linear algebra running on ARM Cortex-M MCU

*February 2018 - July 2018: Software Architect at SHINKAWA LTD.*

Responsibilities:

- Researched and developed new software platform for wire bonding during semiconductor device fabrication

Key Achievements:

- Created a parser to understand SHINKAWA own embedded script language
- Evaluated EtherCAT<sup>14</sup> protocol for the realtime application

<sup>13</sup><https://github.com/jverifast-ug/translate>

<sup>14</sup><https://www.ethercat.org/>

*August 2014 - October 2017: Part-time Researcher at RIKEN Advanced Institute for Computational Science*

Responsibilities:

- Researched functional programming for embedded platform

Key Achievements:

- Published some research papers<sup>15</sup>

*November 2016 - October 2017: Expert Engineer (permanent employee) at SELTECH CORPORATION*

Responsibilities:

- Researched and developed new Secure-OS for ARM Cortex-M platform

*February 2016 - November 2016: Software Engineer (contract employee) at Life Robotics Inc.*

Responsibilities:

- Developed GUI application running on Ubuntu OS, using C++ and Qt<sup>16</sup> for single arm robot

Key Achievements:

- Designed a network protocol for the robotics application

*March 2015 - February 2016: System Enginner (contract employee) at Centillion Japan Co., Ltd.*

Responsibilities:

- Technical support for stock chart application using JavaScript
- Maintained MySQL database servers
- Manager for offshore development in China

Key Achievements:

- Launched new IoT business for farming
- Design a platform<sup>17</sup> to accelerate R<sup>18</sup> programs

*September 2014 - December 2014: Software engineer (trustee agreement) at Axsh co., LTD.*

Responsibilities:

- Developed an OpenFlow application named “OpenVNet”<sup>19</sup>

Key Achievements:

- Provisioned and automated deploying the OpenVNet on AWS platform using Ruby and GNU make

### *March 2012 - July 2013: Software Engineer (permanent employee) at MIRACLE LINUX CORPORATION*

#### Responsibilities:

- Developed own Digital Signage platform running on Intel architecture using Linux OS, C++, OpenGL, GTK+<sup>20</sup>, GStreamer<sup>21</sup>
- Supported and debugged own Linux distribution

#### Key Achievements:

- Debugged and fixed a race condition in the SMP kernel on PowerPC platform
- Debugged and fixed bug of crash<sup>22</sup> command's PowerPC virtual memory
- Designed new Windows installer using NSIS<sup>23</sup>

### *April 2001 - February 2012: Software Development Engineer (permanent employee) at Ricoh Company, Ltd.*

#### Responsibilities:

- Developed own platform for multi-function printer based on NetBSD OS

#### Key Achievements:

- Developed OptionBIOS and bootloader for the platform on Intel architecture
- Designed secure boot for the platform on Intel architecture
- Compressed boot time of the printer onto 10 seconds
- Verified m:n POSIX thread library

## Education

- March 2001: Master of Engineering from Department of Electrical and Electronic Engineering, Tokyo Metropolitan University.  
The thesis: "Multimode Quartz Crystal Microbalance"<sup>24</sup>

## Publications and Reports

- Kiwamu Okabe and Hongwei Xi. "Arduino programing of ML-style in ATS"<sup>25</sup>. ML workshop, 2015.
- Kiwamu Okabe and Takayuki Muranushi. "Systems Demonstration: Writing NetBSD Sound Drivers in Haskell"<sup>26</sup>. Haskell Symposium, 2014.

## Activities

### *Open-source projects*

#### **Metasepi Project**<sup>29</sup>

- Challenge to create an open-source Unix-like operating system designed with strong type such as ML or Haskell.
- Rewriting NetBSD kernel using Ajhc Haskell compiler. <https://github.com/metasepi/netbsd-arafura-s1>

#### **Ajhc Haskell compiler**<sup>30</sup>

- Extend and add embedded features to Jhc Haskell Compiler <http://repetae.net/computer/jhc/>.
- Ajhc has thread-safe and reentrant runtime. Also has Erlang style GC. It means Ajhc's Haskell context has own GC heap. GC can run on tiny CPU such as Cortex-M3 with 32kB RAM.

#### **Japan ATS User Group**<sup>31</sup>

- An user group for ATS language promotion of utilization. Translating ATS documents into Japanese.

#### **Debian Maintainer**<sup>32</sup>

- Maintained uim package at Debian squeeze, and packages using Haskell at sid.

## Computer Skills

- Languages: C, C++, Haskell, Intel/ARM assembler, Ruby, PHP, SQL, OCaml, Python, Erlang, JavaScript, R
- Platforms: Linux, NetBSD, FreeRTOS, ChibiOS/RT, Android NDK, Cygwin, MinGW, Bare metal
